

Santa Rosa lead backed gypsum wallboard is furnished as 1/2" and 5/8" fire code gypsum board meeting classification ASTM C 1396, with pure lead sheet meeting federal specification QQ-L-201 F, which is then factory laminated to the back side of the gypsum panel. The lead extends over the width of the gypsum board and 2" strips are included to cover the vertical joints between each of the boards. Strips are also required at the corners.

Shielding accessories for installation include 2" lead strips, lead discs for screw penetrations, and sheet lead for backing and shielding of cutouts for electrical, plumbing, medical gas or other penetrations as well as corners
